PING ERROR TEST

Explain proper scenario for following ping errors ?

Destination host unreachable

When we ping two network devices, then it checks the Destination IP has route in the System route table, if it doesn't have route, then it shows "destination host Unreachable".

Request timed out

When we ping a PC2 from PC1 with in between a router, then the data passes from PC1 to PC2 but there will be no reply from PC2, then there shows an error called "Request timed out".

Reply from some ip destination host unreachable

It means a device with the IP shown Cannot reach the destination IP because there is no available path or route to it. It Can be a router, PC, switch, etc.

TTL expired

When TTL is used to Control the L3-looping and saves the router from being down, it has TTL value, but when the loop Continues and TTL becomes 0, then it shows some error Called "TTL Expired" in the ~~route~~ PC.
